

Adding blog articles to ecb-monitor.zew.de

One time preparations

- (one-time setup of Python and modules + git clone of repo, usually done for you by pbu)
- Install [VS Code](#)

Structure of the blog content

- Blog articles are written as single files in
content/blog/policy/de/
content/blog/policy/en/ or content/blog/science/de/
content/blog/science/en/
- Files are named [year-month-day].md
- Files are Written in [Markdown format](#)
- For editing use [VS Code](#)
- Create English and German versions in .../en and in /de

Run the Website on your notebook, to check results

- Windows Explorer
- Navigatate to parent directory of ecb-monitor
 - Usually somewhere under "Documents" - "Meine Dokumente"
- Right-click on folder icon - and choose Open in Terminal

In the black terminal window

- Be sure, that the prompt line ends with ...ecb-monitor>
- Enter git pull
 - Usually resonse is Already up to date.
- Keep the black window open

Switch to Windows Explorer again

- Navigatate to directory ecb-monitor/content/blog/[policy|science]/en and -de
- Now create new files with extension .md
 - You can also copy an existing file and rename it
- Open the new files with VS Code
- Writing a blog post in English and German
- Title, subtitle, vignette
 - First line is the blog title - appears in list and in detail view
 - Second line is the subtitle - appears only in list view

- Third line is an optional vignette.
 - Available vignettes here /templates/blog
 - For instance fhe-grey
- Links and content images
 - Write hyperlinks like this: [link title](#)
 - Content image need to be saved under /static/img/blog-[2026-mm-dd]
 - Content image can then be references like this ![my image label](../static/img/blog/my-image.jpg)
 - Content image must be resized by hand
- Possible sources for content images
 - [Adobe Stock Picture Database](#)
 - [wikimedia commons](#)
 - Self-created images - by using Google Gemini nanon banana LLM.

Check your new content

- To check your new content in the website locally on your own notebook
- Switch to the black terminal window
 - Start the website on your notebook
 - Enter python app.py
 - Response should end with * Running on http://192.168.178.80:5000
- Go to your web browser and open http://localhost:5000/
 - Navigate to the ECB-Watching – der Kommentar
 - Navigate to the Neues aus der Forschung
 - Check your new blog content
- Switch to VS Code - and change your blog conten (German and English)
- Switch back to your web browser
 - F5 or CTRL+R to reload
 - Check your changes

Bring your changes live

- Make your changes visible on ecb-monitor.zew.de
- Go to the black terminal window
- Enter these three lines

git add *

git commit -a -m "[my short description]"

git push

- The last line git push should result in a 20 lines response
 - Check your changes on ecb-monitor.zew.de
-
